

Year 6 - Living things and their habitats (Biology) Working Scientifically Focus: Interpreting and communicating results.

ANIMAL CLASSIFICATION Key Vocabulary: **Prior learning:** VERTEBRATES INVERTEBRATES Organisms which have an internal backbone Vertebrates Year 4: FISH REPTILES MAMMALS surrounded by bone, also called vertebrae. Recognise that livings can be grouped in a variety of ways. AMPHIBIANS BIRDS invertebrates An animals that do not have a spine. Explore and use classification keys to help group, identify and a name variety of living things in their local and wider environment. A mammal is an animal that breathes air, has Mammals a backbone, and grows hair at some point Year 5 during its life. In addition, all female mammals Describe the differences in the life cycles of a have glands that can produce milk. mammal, an amphibian, an insect and a bird. Describe the life process of reproduction in some plants and animals. Amphibians any organism that is able to live both on land and in water. In this topic, we are learning to: A reptile is a cold blooded creature, which Reptiles means that they rely on heat from their Describe how living things are classified into surrounding environment to warm up. broad groups according to common observable characteristics and based on similarities and differences, includina A place where living things rely on each other Biome micro-organisms, plants and animals. to survive. Give reasons for classifying plants and animals Reproduction How a living thing creates new versions of based on specific characteristics. itself. Life cycle The different stages of a living thing's life.

Questions you will know the answers to... How can you organise animals into groups? How can plants be classified into groups? What animals are classified as vertebrates and invertebrates? What are the similarities and differences of an organism, plant and animals?

Working Scientifically Assessment Focus:

INTERPRETING AND COMMUNICATING RESULTS.

- Report and present findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in (validity of) results, in oral and written forms such as displays and other presentations.
- In their conclusions, identify causal relationships and patterns in the natural world from their evidence; identify results that do not fit the overall pattern; and explain their findings using their subject knowledge.
- Use the scientific knowledge gained from enquiry work to make predictions they can investigate using comparative and fair tests.
- Communicate their findings to an audience using relevant scientific language and illustrations..
