

In this topic, we are learning to:

- Locate the world's countries, using maps to focus on Europe, concentrating on their environmental regions, key physical and human characteristics, countries, and major cities
- Name and locate counties and cities of the United Kingdom, geographical regions and their identifying human and physical characteristics, key topographical features (including hills, mountains, coasts and rivers), and land-use patterns; and understand how some of these aspects have changed over time
- Identify the position and significance of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, the Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Prime/Greenwich Meridian and time zones (including day and night)
- Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.
- Use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies
- Physical geography, identify and discuss: climate zones, rivers, mountains, and the impact of the water cycle
- Human geography, identify and discuss: types of settlement and land use, economic activity including trade links, and the distribution of natural resources including energy, food, minerals and water

EUROPE

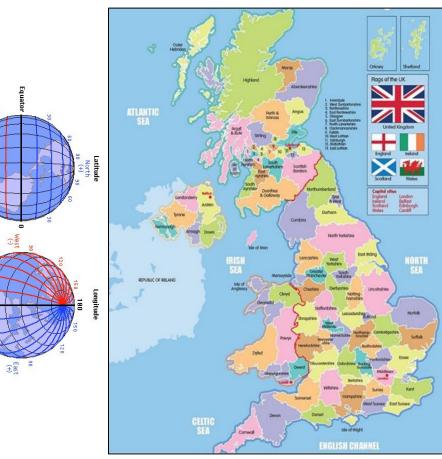

Geographical Vocabulary				
Country	A country is land that is controlled by a single government. Countries are also called nations, states, or nation-states. Countries can be large or small.			
Europe	Europe is Earth's second smallest continent after Australia but it has one quarter of the world's population. Europe's western coast is on the Atlantic Ocean. There are 44 European countries, which have distinct ethnic groups and languages.			
Мар	A map is a picture of a place, usually drawn from above. We have big giant maps and small maps with lots of detail.	-		
Longitude	Lines of longitude run from the top of the Earth to the bottom, and divide up the Earth a bit like the segments of an brange.			
Latitude	Lines of latitude run around the Earth like imaginary hoops and have numbers to show how many degrees north or south they are from the Equator.			

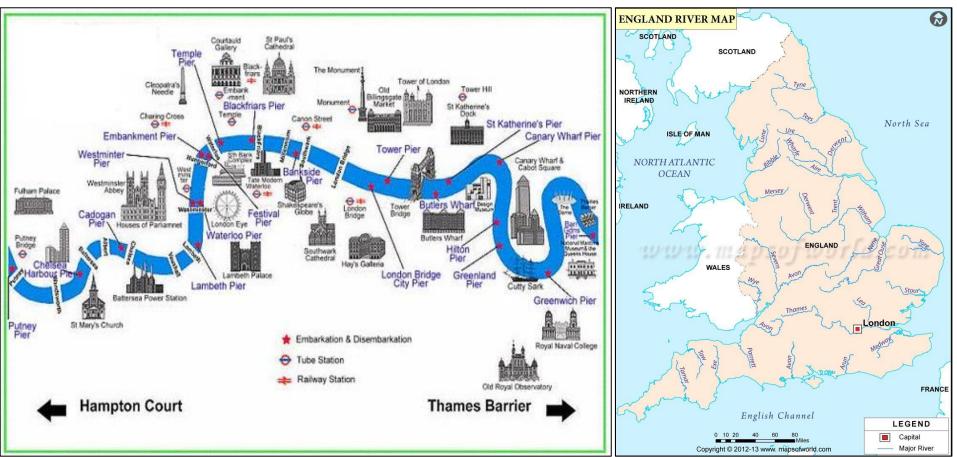

Geographical Vocabulary		Rain and snow	Loke Glacier Rapids Waterfall	
River	A path that water takes as it flows downhill.	Tributary Flood plain Oxbow lake		
Source	The beginning of a river.	- Fee	Salt marsh Delta Deposited	
Bank	The riverbank is the land at the side of the river.	Source zone Transition zone Floodplain zone		
Bed	The bed is the bottom of a river. A riverbed can be made of sand, rocks or mud depending on the river.			
Current	The strength and speed of the river. The steeper the ground is, the stronger the current will be.			
Tributary	A smaller river that feeds into a larger river.	Nile	Length: 6650km the longest river in the world. Source: Lake Victoria (Tanzania) Course: It flows north through north-east Africa.	
Confluence	The point at which two rivers meet.	Amazon	Mouth: Mediterranean Sea (Egypt). Wildlife: Nile crocodile and hippopotamus. Fact: The banks along the Nile provide fertile land in the desert. Length: 6400km the second longest river in the world. Source: Andes mountain range (Peru) Course: It flows east across South America. Mouth: Atlantic Ocean (Brazil) Wildlife: Anaconda, piranhas, pink river dolphin and electric cel. Fact: The Amazon holds more water than any other river.	
Watershed	The area of land that drains into a river.	Yangtze	Indext: Additional and the Control of Source in the world. Source: Tanggula Mountain Range (China) Course: It flows east across China (Asia). Mouth: East China Sea (Shanghai, China) Wildliffe: Yangtze giant softshell turtle, Chinese alligator and Chinese giant salamander. Fact: How to the Three Gorges Dam which is one of the largest dams in the world.	
Floodplain	An area of land that is covered with water when a river overflows.	Severn	Length: 354km (longest river in the UK) Source: Cambrian Mountains (Wales) Course: It flows in a semi-circular route through Wales and western England. Mouth: Bristol Channel (England) Wildlife: many fish such as carp and eels, as well as otters and water voles. Fact: The estuary of the River Severn provides a physical boundary between England and Wales.	
Meander	A curve in the river.	Mersey	Length: 112km long Source: River Tame & River Goyt (Stockport) Course: It flows west from Stockport to Liverpool. Mouth: Liverpool Bay (Irish Sea) Wildlife: Salmon & smolt. Atlantic grey seals and bottlenose dolphins can sometimes be spotted near the estuary. Fact: Every year the Tall Ships Race start on the River Mersey.	
Mouth	The end of the river where it flows into the sea or lake.	Alt	Length: 28km long Source: Hag Plantation (Huyton) Course: It flows north-west through Merseyside Mouth: Irish Sea (Hightown) Wildliffe: Pike, sticklebacks, heron and kingfishers. Fact: The towns that are found along the river include Huyton, Kirkby, Maghull and Formby.	

RLEY

Questions you will know the answers: What are lines of longitude and how are they measured? What are the positives and negatives of living by a river? What are lines of latitude and how are they measured? What are the main features of a river system?

What are the main rivers in Europe and UK? How has the River Thames impacted London? What is the role of the Thames Barrier? How are cities impact by natural geographical features?

What other geographical features impact land usage and growth of cities? How does the water cycle affect rivers?

Assessment Focus:

Enquiry/Skills

Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.

Use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies

<u>Knowledge</u>

locate the world's countries, using maps to focus on Europe, concentrating on their environmental regions, key physical and human characteristics, countries, and major cities

name and locate counties and cities of the United Kingdom, geographical regions and their identifying human and physical characteristics, key topographical features (including hills, mountains, coasts and rivers), and land-use patterns; and understand how some of these aspects have changed over time identify the position and significance of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, the Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Prime/Greenwich Meridian and time zones (including day and night)

Physical Geography

Physical geography, identify and discuss: climate zones, rivers, mountains, and the impact of the water cycle

Human Geography

Human geography, identify and discuss: types of settlement and land use, economic activity including trade links, and the distribution of natural resources including energy, food, minerals and water
